CONTINGENCY PLANS
Be prepared

MOVING WATER *any way you want it*

Disasters happen – you don't plan them. Really? At Van Heck, we are stubborn in our assertion that emergency situations can be planned for. A crisis becomes manageable by describing potential scenarios and incorporating them in a plan. Van Heck's contingency plans prevent the very worst happening.

Every company has an evacuation plan in case of emergency. What is your plan if a pumping station fails or a dike is breached? What if your pumping station can't cope with the high water level caused by a storm and there's a threat of homes being flooded? The investment in a contingency plan is a fraction of the loss you will avoid as a result.

EVERYTHING TO PLAN

Factories, water boards, local authorities, nuclear power plants: all kinds of locations can be overcome by excess (or lack) of water. The sooner Van Heck's pumps are on the scene, the better. With a plan to hand, you can spring into action instantly and provide an adequate and responsible response. This also avoids (financial) distress.

CONTENT OF CONTINGENCY PLAN

We will visit your emergency-sensitive location together and run through disaster scenarios with you. Then Van Heck will prescribe pumps and pumping capacities, supply routes, other required materials and where these can be found (locally), etc. Every detail

is considered. Van Heck will provide three different solutions, so there's always a plan B, and indeed a plan C.

WHY VAN HECK?

Van Heck is frequently called in when an emergency strikes, so we know exactly what's required for an adequate response. Speed and a ready solution are then of utmost importance. Van Heck's contingency plans provide guidance, while Van Heck's flexible professionals manage the situation. So when disaster strikes, everything runs according to plan.

ADVANTAGES OF CONTINGENCY PLAN

- Timesaving
- The local situation is known
- All those involved know what to do
- Substantially lower costs
- Less damage thanks to rapid response
- Professional and reassuring approach
